

TLA SERIES

LOW NOISE BIPOLAR INLINE PREAMPLIFIERS

FEATURES

- 50 OHM INPUT/OUTPUT
- OVER-VOLTAGE/POLARITY PROTECTION
- VERSATILE MOUNTING OPTIONS
- HIGH THIRD ORDER INTERCEPT
- RESISTANT TO INPUT OVERLOAD

Telewave TLA Series in-line preamplifiers use surface-mount bipolar devices to amplify low level RF signals by up to +34 dB. The primary application of these preamplifiers is to improve the noise figure of a receiver system. Preamps compensate for splitter insertion loss or losses from long coax cable runs, and increase signal levels to spectrum analyzers or other test equipment.

Each preamplifier is housed in a rugged, custom made, RF-tight aluminum enclosure. The DC input is reverse polarity protected, and equipped with a high-pass filter to eliminate RFI. Preamplifiers are tuned to customer specified center frequencies.
